

Outputs/Activities

Knowledge production

- Academic articles
- Conference presentations
- Research and workshop reports from case sites

Knowledge transfer

- Policy brief series
- National policy design workshops
- International policy dialogue
- One Health governance resource toolkit

Community engagement

- One Health community of practice for AMR
- National Policy design workshops

Intermediate outcomes

Novel and practically relevant evidence-based recommendations for effective AM multi-level governance and policy

Improved One Health-informed and context-specific decision-making processes for AMR governance

Behavioral change among AMR governance and policy stakeholders
Capacity change in terms of knowledge, skills and attitudes among stakeholders participating in design workshops

Primary outcome

Progressive antimicrobial governance approaches that foster multi-sectoral coordination mechanisms guided by One Health principles

Impact

National level: Development and implementation of progressive AM stewardship governance strategies hastening greater multi-sectoral coordination via mechanisms identified by the research findings

Global level: More effective multi-level governance and international cooperation that enhances governance of AMR stewardship systems and reduces AMR
